**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 4-7, and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Foldesi (US 4,682,463).

Foldesi discloses an apparatus for heat sealing containers and forming of cut out membranes 22 by punch assembly 124. The membranes 22 are carried through membrane star wheel 110 to containers on upper and lower star wheels 112 and 114; see figures 6 and 7. The membranes 22 are advanced to the sealing carrousel 186 (see figure 8; not entirely shown) during a movement phase of the star wheels.

Regarding claims 5 and 6, in one embodiment the membrane web 182 is at a feed angle (approximately 30) to the cutting/punching station 184. The cutting device 100 is a triple cutting tool however Foldesi recognizes the substitution of a double cutting device; see column 10, lines 54-59.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and

Art Unit: 3721

the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2-3 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Foldesi (US 4,682,463) in view of Foldesi et al. (US 5,522,200).

Foldesi '463 do not disclose a number of vacuum stations on the membrane star however Foldesi '200 teach an apparatus for sealing containers comprising turret 18 with vacuum heads 40 for advancing cut out membranes from supply element 36. Heater head 51 performs the heat sealing operation once the vacuum positioning system transfers the membrane cut out in place. It would have been obvious to one of ordinary skill in the art to modify Foldesi '463 with the various teachings of Foldesi '200 for performing the heat sealing operation precisely.

### ***Response to Arguments***

5. Applicant's arguments filed 9/12/03 have been fully considered but they are not persuasive. Foldesi '463 uses heat sealers to seal the containers during a dwell period however advances membranes 22 to sealing carrousel 186 (three containers indexed) by the star wheel in a movement phase.

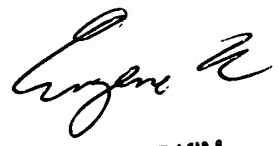

### ***Conclusion***

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christopher R Harmon whose telephone number is 703-308-8643. The examiner can normally be reached on Monday-Thursday from 8-6.
